

Landon Nguyen

Data Science | AI Engineering

landonnguyen.ds@gmail.com | Little Elm, TX | (972) 632-6912 | [Portfolio](#) | [GitHub](#)

SUMMARY

Data science student with 6 years of programming experience and 3 years applying statistics and machine learning to data-driven problems. Builds and deploys ML and LLM applications, from explainable neural networks to RAG systems and AI agents.

EDUCATION

The University of Texas at Arlington | Arlington, TX

August 2023 – December 2027

Dual-Track M.S. Applied Statistics and Data Science & B.S. Data Science | Biology Concentration | Minor in Mathematics

GPA: 3.9

Coursework: Current: Statistical Analysis with SAS; Linear Algebra and Statistics with R — Upcoming: Advanced Regression Analysis; Machine Learning Applications; Data Mining with Information Visualization

Self-Study: LLM Engineering (RAG, QLoRA, Hugging Face); Agentic AI (Agents SDK, CrewAI, LangGraph, MCP, Guardrails)

Planned (by Jan 2027): AI in Production (AWS Bedrock, Terraform, CI/CD, LangFuse); Azure Databricks, PySpark, Delta Lake

Certifications: IBM Machine Learning with Python, IBM Machine Learning Methodology, PyTorch for Deep Learning

PROJECTS AND AI EXPERIENCE

AI Resume Digital Twin | *OpenAI Agents SDK, ChromaDB, Gradio, Render*

Independent Project

- Built an agentic chatbot that answers recruiter questions about my background using retrieval-augmented generation (RAG) over LLM-assisted semantic chunks stored in ChromaDB.
- Added tools for email capture and unanswered-question logging so the agent records gaps instead of hallucinating; deployed the Gradio app on Render and embedded it in my portfolio as a chat widget, keeping the OpenAI key server-side.

Infant Mortality Prediction & Explainable AI App | *TensorFlow, SHAP, Streamlit*

DATA-4381 & 4382: Capstone

- Reduced 643 district-level features for India's Empowered Action Group states to 14 via forward selection, clustering, and PCA; trained a neural network (test $R^2 = 0.87$), benchmarked against linear and tree-based models.
- Deployed a Streamlit app that uses SHapley Additive exPlanations (SHAP) from a district's prediction to surface its top drivers, then an AI agent researches their impact and proposes interventions to reduce IMR.

Chest X-Ray Classification | *TensorFlow/Keras, DenseNet201, Transfer Learning*

DATA-4380: Data Problems

- Enhanced lung X-rays with CLAHE and augmentation; fine-tuned DenseNet201 with class weights to diagnose COVID-19 or viral pneumonia (test macro F1 = 0.83), after benchmarking ANN, CNN, and frozen VGG16 baselines.

LLM & Agentic AI Applications

Independent Projects

- Built agentic workflows with the OpenAI Agents SDK, including an automated email pipeline, and a multimodal chatbot integrating LLMs, image generation, and text-to-speech.

WORK EXPERIENCE

Mexican Bar Company | *Busser, Expediter, Server, Bartender*

2021 – Present

- Rotated across four roles in a high-volume restaurant, building prioritization under pressure and team communication.

SKILLS

Languages: Python, SQL, R, SAS

Data Science: NumPy, Pandas, SciPy, scikit-learn, imbalanced-learn, Statsmodels, Matplotlib, Seaborn, Tableau

Machine Learning: Regression, Classification, Ensemble Methods, Dimensionality Reduction, Feature Selection, Imbalance Handling

Deep Learning & AI: PyTorch, TensorFlow/Keras, Transfer Learning, SHAP, OpenAI APIs, OpenAI Agents SDK, RAG

Mathematics & Statistics: Hypothesis Testing, Multivariate Statistics, Nonparametric Tests, Linear Algebra

Tools & Deployment: Git/GitHub, Jupyter, SQLite, ChromaDB, Streamlit, Gradio, Render, Claude, Cursor
